Profile

Biology Student with hands-on research experience in cellular processes and experimental design. Successfully collaborated on a project that won 1st place at the university science fair, showcasing the impact of environmental stressors on plant growth. Additionally, implemented a new data collection method, improving accuracy by 20%, which helped the team draw more reliable conclusions. Skilled in mentoring peers and simplifying complex concepts, bringing a strong foundation in biological systems to any research team.

Work Experience

Biology Student

- Conducted thorough research on cellular processes in a lab setting, which involved designing experiments and analyzing data to advance understanding of biological systems.
- Collaborated on a group project to study the effects of environmental stressors on plant growth, resulting in a presentation that won 1st place at the university science fair.
- Implemented a new data collection method that improved accuracy by 20%, helping the team draw more reliable conclusions from our experiments.
- Assisted in mentoring first-year students during lab sessions, which helped them grasp complex concepts and improved their lab skills significantly.
